                                                                                                                                                                                                                                                                                                                                                                                                                             neoplasm. It is used to produce an antibody to the protein, contacting this with the tumour sample and detecting immune complexes as indication of the presence in the tumour sample of the protein. Whole sequence or a unique sub-region can be used. The method identifies patients lacking the defective relinchlastoma (RP) allele and thus are not at risk of
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 451 IOGAJATOTANGAAAJAAATIGIGGALIGGIGCIAAAAGINICINGGALGAGALITIIA 510

relinshiasterma gene Rb. Absence of mailting of the instance issue as AxA04502) predisposes an individual to retinoblastoma. To isolate We have, the human name price FH3. Isolated from a human chromosome 13 lambda phage library, was used in a chromosome walk to isolate and map 40 kb of genomic DNA surrounding the H3.8 of squence. Fragment p7H30.7R (ATCC 97500) was obtained, and was used as a probe to screen a cDNA library that had been constructed from an adenovirus 12-transformed human embryonic retinal cell inc. This provided clone F4.7R (ATCC 97387), which is northern bluts cross-reacted with a 4.7 k ATCC 97387), which is northern bluts cross-reacted with a 4.7 k transformed cell samples. Rb nucleic acids comprising the Rb osteosarroma cell samples. Rb nucleic acids comprising the Rb of ene. ChNA or a fragment of the gene, such as one of the 27 exons or 25 introns, can be used in a claimed method for detecting a deletion or point mutation in the Rb gene of a human patient. The gene can also however the synthesize Pt prigetide (see AAVUTA1) for gene can also however.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       124 GAGGACTIGOCTECTOSTO AGGCTTGAGTTTGAAGAAACAGAAGAACAGAACTGATTTTACTGCA 183
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Isolated human retinoblastoma gene - used to develop products for analysing predisposition to retinoblastoma and for the detection and

anticancer agent is used for the treatment of cancers such as breast, bladder, skin, stoment, liver, colon and cral carity. Tymphona and cukenmia. The anticancer agent induces apoptotic death of cancer cells and the Rb inhibitor increases the apoptotic inducing activity of mycolactoc ever in Rb positive cancer cells. The agent is specific to mancers in which Rb professive employing are optimally expressed and mycolactone shows very strong anticancer effort in vitro as well as in vivo.

```
protein (RTSP) of the invention. The proteins can be used for inhibiting celiciar proliferation, when coadministered with a p53 protein. The RTSPs can be used for treating diseases characterised by abnormal cellular proliferation, particularly cancers. The RTSPs have a broader spectrum of activity than wild type RTSPs.

This sequence eroodes a modified retinoblastoma tumour suppressor protein (RTSP) of the invention. The proteins can be used for inhibiting cellular proliferation, when coadministered with a p53 protein. The RISPs can be used for treating diseases characterised by abnormal cellular.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   proliferation, particularly cancers. The RTSPs have a broader spectrum of activity than wild type RTSPs.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            .2505  ```
This sequence encodes a modified retinoblastoma tumour suppressor protein (RISP) of the invention. The proteins can be used for inhibiting cellular proliferation, when coadministered with a pf3 protein. The prsps can be used for treating diseases characterised by abnormal cellular.
                                                                                                                                                                                                                                                                                                                                                                                                                                                               profiferation, particularly cancers. The RTSPs have a broader spectrum of activity than wild type RTSPs.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  [6] PhoAsaLeuLysdlulleAspThrSerThrLysValAspAsaAlaMetSerArgLeu 120

A new claimed polypeptide is a lusion of (i) a transcription sector (FF) comprising a lus included domain, and (ii) a retinoblastoma (Rb) polypeptide that includes a growth suppression domain. Also new are: (I) a furticit acid checoding the fusion protein, and (2) expression vectors contained such ban, weetons (especially adenovirus vectors), is used to treat by experioning porticinary vectors, specifically current (particularly of the bladder) or restenosis (after any objection) as the properties of the bladder) or restenosis (after any objection protein day of the bladder) or restenosis (after any objection protein any objection).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             90 GlnLysAsnileGlnHeSerValHisLysPhePheAsnLeuf.cullysGlnHeAspHr 109

The present investion describes a composition comprising a recombinant addenovirus expression vector, where the vector has an insert of exceptions DNA comprising a gene encoding a loreign protein and adenovirus DNA in which all of the coding sequences of Ela, Elb, and protein IX, and part of Es are deleted. The vectors are useful in gene thorage treatment of cancer, especially for treating ps3 deficient unious. The vector enables saler and more ellicient quee therapy of cancer. The present sequence encodes human pilo-RB relinoblasional unious suppressor which can be used as the foreign quee in the above
                                                                                                                                                                                                                                             Percombinant adenoziral vertors useful for gene therapy of cancer, especially p53 delicient tumours

The present invention describes an adenovital expression vector comprising a deletion in the protein IX gene and a gene encoding a fereign protein. This vector can be used in 3em therapy, particularly to introduce tumour suppressor genes into neuronous cells, Genes which may be used include p53, thymidine kinese and retinoblastoma tumour suppressor gene (Rb). The present sequence is the retinoblastoma tumour
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Recombinant adenovirus expression vector comprising a partial or total deletion of a protein IX DNA and a gene encoding a foreign protein e.g. suicide protein, useful for inhibiting or reducing the proliferation of

```
protein, designated as p1088.

The twention relats to recombine the cities expression solution that stars to recombine the control of the adenoviral protein IX ENA beginning at molecides 357 or 369 and ending at 4030-4050, and having a gene encoding a foreign protein such as tumour suppressor protein. Such protein protein such as tumour suppressor for screening tumour suppressor as a sed for screening tumour suppressor agence useful in gene therapy. The vector is particularly ascful for treating or reducing hyperproliferative cell disorders such as thyroid hyperplasia. Grave's disease, psoriasis, tender the hypertrophy. It is also the second in suppressor as thyroid hyperplasia. Spathome, autoris specifically heppalocellular carcinoma, neoplasms, leukaemias, lymphomas, etc. to inhibit tumour proliferation or to medicine particular related by the second for the second and any sease.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                New recombinant ademovirus expression vector having a gene encoding for a foreign protein and a partial or total deletion of the ademoviral protein IX DNA, useful in gene therapy for treating or reducing hyperproliferative cells.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                The present cDNA sequence encoded retinoblishoms (RB) tummar suppressor
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 259 GACCHGCCFCFCGFCAGGCTTGAGTFTFGAAAACAGAAGAACCTGATFTTTACFGCAFTA 318
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        279 GITICAFCIGIGAAFGGAGIAITGGGAGGTIAIAITGAAAAGAAAAAGGAACIGIGGGGA 438
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    21 ProAlaProProProProProProCluGluAspProGlaGlnAspSerGlyProGlu 40

The recombinant advanceins expression vector is particularly useful for treating or suppressing proliferation of a tumour, e.g. non-small cell bing cancer, small cell lind cancer, small cell lind cancer,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               The present invention describes a recombinant adenovirus expression vector, which omprises a partial of related of a protein {\bf X} EMA and a gene encoding a foreign protein. The recombinant adenovirus vector

cellular proliferation inhibitor; ss.

```
This sequence encodes a modified relimoblastoma tumour suppressor profein (RISP) of the invention. The profeins can be used for inhibiting contains proffication, when cradministered with a pSA profein. The PISPs can be used for treating diseases characterised by abnormal cellular profiferation, particularly cancers. The RISPs have a broader spectum of
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         ATCTGIATCTITATTGCAGCAGTAGACCTAGATGAGAGATGTCGTTCACTTTACTGAGGCTA 366

 treat conditions related to (premature) agains, e.g. macular degeneration and arteriosclerosis. The cells can also be used to replace tumour cell
                                                                                                                                                                                                                                                                                                                                                                                                                               e.g. the number of mitolic divisions, of a cell. The method refless on activation of a telomerase activity and inhibition of one or both of a retinoblastom where the pathway or a p53 pathway. Phosphorylation of known yellowed (Bb)/INK4 pathway or a p53 pathway. Phosphorylation of known superessor picknessor cake and cuke, releases the relistint the division cycle. Binding of INK4 family members, e.g. the tumour superessor picknessor picknessor picknessor as selectively and resertist in arouth arrest. Be inactivators can selectively and reversibly inactivate an Rb/INK4 pathway. The enceptotein MDM2 is a cellular inhibitor of Rb/E2F function and the p54 tumour suppressor and also be used in the methods. Other moreoules which can be used include cake or cake mutants. In particular, a cake mutant is one which differs from at one or more of residues K22, R24, H95 and/or D97.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              lines in vitro and for studies on biochemical and physiological aspects of growth and differentiation. Long lived (immortal) cells could also be of use in the production of normal or genetically engineered
                                                                                                                                                                                                                                                                                                                                                                                                                 The invention concerns methods and reagents for extending the life span,
                                                                                                                                                                                                                                                    New method for increasing the prollierative capacity of cell lines comprises administering agents reversibly activating felomerase activity and reservely increases activity and reserve the increases in treating age related discases
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               what drouprotein which bypasses K and/or p3. Antisease constructs of the Rb and pl61NK4a genes may also be used. The methods are useful for increasing the proliferative capacity of eeits, the cells are
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    increasing the proliferative capacity of eeils, the cells are subsequently of use in pharmaceutical and cosmette preparations used to
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           21 ProAlaProProProProProProGluGluAspProGluGluAspSerGlyProGlu 40
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            41 AspteuProteuValArgLeuGluPheGluGluthrGluGluProAspPhethrAlateu 60
